

Agency: Commerce, Community and Economic Development

Grants to Municipalities (AS 37.05.315)

Grant Recipient: Fairbanks (City of)

Project Title:

Fairbanks (City of) - South Fairbanks Street Resurfacing

State Funding Requested: \$ 155,000
One-Time Need

House District: 9 - E

Brief Project Description:

Resurfacing, reconstruction and improvements of transportation infrastructure.

Funding Plan:

Total Cost of Project: \$155,000

<u>Funding Secured</u>		<u>Other Pending Requests</u>		<u>Anticipated Future Need</u>	
<i>Amount</i>	<i>FY</i>	<i>Amount</i>	<i>FY</i>	<i>Amount</i>	<i>FY</i>
There is no other funding needed					

Detailed Project Description and Justification:

The following individual projects should be considered severable. Our intent is that if this item is partially funded, the city will prioritize funding between these projects.

- 25th Avenue to cul-de-sac west of Cowles - \$50,000. This road has never been surfaced and is currently a gravel road, requiring extensive maintenance to control dust and maintain a safe driving surface. Proposed improvements include grading and re-profiling the structural section, constructing drainage improvements and resurfacing with 2 inches of asphalt concrete (AC) pavement.

- 26th Avenue to cul-de-sac west of Cowles - \$40,000. This road was surfaced with RAP approximately 8 years ago and the surface has reached its practical life and the road is failing due to raveling, pot holes, poor drainage and some failure of the structural section. The most economical course of action at this time is to grind the existing surface, reconstruct portions of the structural section where required and blend the existing surface into the road embankment, re-profile the road and construct roadside drainage improvements, and surface with 2 inches of AC pavement.

- Bjerremark Street from 23rd to 28th Avenue - \$65,000. Bjerremark Street was surfaced approximately 10 years ago with chip and seal and the road surface has reached its useful life and is beginning ravel, large potholes are developing with base course and sub-base erosion due to poor drainage. Proposed improvements include grinding the existing surface, reconstructing and re-profiling the structural section where required, constructing drainage improvements, and surface with 2 inches of AC pavement.

Project Timeline:

Most work should be completed in Summer of 2008. If additional work is needed, this project may extend into 2009.

For use by Co-chair Staff Only:

4:14 PM 4/29/2008

Entity Responsible for the Ongoing Operation and Maintenance of this Project:

City of Fairbanks
