This is a new project.

Project Description/Justification:

Corporate (AHFC) funds will be used to upgrade existing security and door access systems to senior/disabled and multi-family public housing. The project includes replacement of security and door access systems that are outdated and no longer supported by manufacturers for replacement parts and software. A recent survey was conducted to identify the location, configuration and current condition of door access and security systems in senior/disabled and low-income multi-family housing in Anchorage, Fairbanks and Juneau. Many of the systems were found to be outdated with analog type cameras, recorders, card readers and software components that are no longer supported by the various manufacturers of systems compatible with currently available equipment.

Systems have already been upgraded and standardized in the Anchorage area. This funding is intended to upgrade and standardize systems for Fairbanks and Juneau to use the same digital technology already in place in the Anchorage properties. Standardization will consolidate purchasing and maintenance of system components. The projected outcome includes: increased security for residents; reduced theft and vandalism; reduced maintenance and custodial cost; and increased useful life of structure.
