**Project Description/Justification:**

The Alaska Military Youth Academy (AMYA) program is operating from a campus which was originally constructed in the 1970's, for a completely different purpose. Facilities were designed and intended to be utilized for short term use only by Alaska Army National Guard forces during two-week annual training periods. Facilities are built of concrete block construction on a concrete slab. In 1994, with very minor modification, the facilities were set up to house the AMYA ChalleNGe Program. The Alaska ChalleNGe Program has continued to operate in the same inadequate "make do" facilities since the program began in 1994. Projects identified are based on a comprehensive AMYA facilities "Condition Survey Report" issued in March 2007.

The funds from this project will replace flooring with slip resistant material, replace interior and exterior doors, install an emergency backup generator, install a sprinkler system, install a public address system, replace heating system, repair walls, replace electrical wiring and renovate restrooms.

Approval of funding will allow for numerous needed and positive changes to be made on the AMYA campus. In order for the AMYA ChalleNGe program to continue operating at the present location, remediation of life, safety, and hazardous conditions is paramount. Efficiency measures would have a positive effect on the annual operating cost of the program. The educational program would also benefit from an enhanced interior environment both in the classroom and living areas.

Projects ensure a safe and productive environment for students and staff and promote educational and vocational opportunities for Alaska Youth while contributing to the overall AMYA performance management framework.
