Project Description/Justification:

These inspections/inventory analyze randomly selected highway segments to produce and extrapolate of the condition of the entire highway system. The inventory produces a highway system "Report Card" that helps the department allocate funding and resources to work activities that are lacking. This effort provides a clear definition of which highway components (i.e., pavement, roadside vegetation, culverts, etc.) require additional manpower and resources to bring them up to an established minimum criteria. This "Report Card" assists the department in efficiently and effectively maintaining our highway network.

This activity was covered by federal funding until this year. In order to continue this important maintenance management function, state funds are required.
