Brief Summary and Statement of Need:

This project seeks to reduce fatal aviation accidents, focusing primarily on air charter operations in Alaska. Project sponsors developed a real-world software based pilot training product for use in aviation simulators to help charter pilots train on the most heavily flown routes. The advanced training program depicts terrain, shows regional weather conditions, and evaluates a pilot's decision making ability. This request seeks to expand initial success to other air corridors identified by the air service industry. This project contributes to the Department's Mission by reducing injuries, fatalities and property damage and by improving the mobility of people and goods.
