**Project Description/Justification:**

One of FMATS four goals identified in the metropolitan transportation plan is to optimize the utility and lifespan of the existing transportation system. FMATS achieves this goal through its annual preventative maintenance program, a federally-funded project that provides for preventative maintenance activities that demonstrate a cost-effective means of extending the useful life of a federal-aid highway. Preventative maintenance is a planned strategy of cost-effective treatments to an existing roadway system that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system without significantly increasing structural capacity.
