**Brief Summary and Statement of Need:**

Electric utility systems are part of the basic infrastructure of rural communities. The power plant and distribution systems in rural communities may not meet accepted utility standards for safety, reliability, and environmental protections. Due to high costs and limited economies of scale, most local communities cannot make the capital investments needed to meet accepted utility standards.

**Project Description/Justification:**

**Rural Power Systems Upgrade (RPSU):** This program concentrates on power production and delivery, including diesel powerhouse, heat recovery, and electrical distribution. Efficiency, reliability, safety and sustainability are primary drivers throughout the conceptual design, final design and construction process. It is not uncommon to see a 30-40 percent increase in fuel savings after a new powerhouse project is completed.

After completion of the project, the rural utility is required to employ a qualified operator to ensure that the system is properly operated and maintained. Alaska Energy Authority (AEA) provides training and technical assistance to assist communities with proper operation of new facilities.

This program began in 1997 and has expanded since FY1999 with federal funding from the Denali Commission. Federal funds are declining and state funds are needed to continue funding this program.

**FY2015 RPSU scheduled projects:**

<b>Community</b>	<b>General Funds</b>	<b>Federal Denali Commission</b>	<b>Other State GF</b>	<b>Total</b>
Nunam Iqua*	800,000	760,000	1,640,000	3,200,000
