Project Description/Justification:

This Galena Airport Runway and Taxiway B received a Pavement Condition Index (PCI) score below 54 and are recommended for rehabilitation in the 2012 Pavement Inspection Results.

A PCI below 70 for Runways and below 60 for other airfield surfaces is an indication that a project should be programmed in the short term for reconstruction under the Pavement Management System. Poor pavement conditions result in Foreign Object Debris (FOD) on aprons, runways and taxiways and are safety concerns for aircraft moving on the airfield. Damage to aircraft and surface transportation vehicles can result from these conditions.

The airport's operational surfaces are deteriorated and are beyond their usable life.
